

## Company Description

As a leader in building automation, Regulvar is a private company operating nationally since 1974. Recognized for its expertise and experience in automatic control and integration, Regulvar implements innovative, customized solutions for its clients by integrating the heating, ventilation, air conditioning, lighting, access control and video surveillance systems.

Accessibility, co-operation and versatility are at the heart of our values and allow us to offer a helpful local service to our clients with some 600 employees in several branches located throughout Quebec and Ontario.

Joining our team is a perfect opportunity to take up technical challenges and develop in an advanced technology environment where everyone can find fulfilment in work.

## Job Description – Controls Technician (Toronto)

Regulvar is looking for a **Controls Technician**, specialized in building automation, instrumentation and integration, to join its team. Our projects include different areas such as ventilation, geothermal energy, solar energy (thermal and voltaic), access, heating and cooling plants, lighting and the latest technological innovations (IoT, Data Analytic, Cloud) to meet our clients' expectations.

**The candidate must be available to work full-time in Toronto and available to travel within Ontario.**

All candidates must send their resume by email to [cv@regulvar.com](mailto:cv@regulvar.com)

## Main Responsibilities

The control technician will be responsible for, but not limited to:

- Respecting health and safety policies at all time.
- Testing and verifying the quality of installations;
- Performing calibration and maintenance of sensors and actuation devices;
- Completing programming of digital control systems;
- Performing system and equipment start-ups and completing the related documentation;
- Tuning PID loops;
- Making graphic modifications;
- Troubleshooting equipment and determining corrective actions;
- Installing and terminating control devices, such as control panels, sensors, actuators and relays;
- Installing wiring and conduits;
- Providing training to clients.

## Qualifications

The ideal candidate must have the following qualifications:

- College Diploma in instrumentation and automation; electronics; or building mechanical systems;
- Ability to perform physical job-related tasks;
- Knowledge of programmable logic controllers (PLCs);
- Knowledge in general-purpose programming languages (BASIC, C++, GCL);
- Valid driver's licence;
- Have access to a vehicle;
- No criminal Record;
- Good sense of organization and planning;
- Ability to work in teams;
- Great sense of customer service;
- Good communication skills, written and spoken;

## Assets

- Experience in building automation, building mechanics, instrumentation and control;
- Knowledge of HVAC;
- Knowledge of DELTA CONTROLS products;
- Knowledge of computer and telecommunication networks;
- Valid Health and safety trainings: WHMIS, working at heights, locks and tags, arc flash awareness.

*Equal opportunity is part of Regulvar's values and commitments. The masculine gender is used solely to make the text easier to read and therefore applies to all genders.*

*We will communicate only with the candidates selected for interviews.*
